Bài Tập 2.2 The Pythagorean theorem asserts that for a set of n orthogonal vectors $\{x_i\}$,

$$\|\sum_{i=1}^{n} x_i\|^2 = \sum_{i=1}^{n} \|x_i\|^2 \tag{1}$$

- (a) Prove this in the case n=2 by an explicit computation of $||x_1+x_2||^2$
- (b) Show that this computation also establishes the general case, by induction.

Prove (a):

Với n=2 ta có:

$$||x_1 + x_2||^2 = (x_1 + x_2)^*(x_1 + x_2)$$

$$= (x_1^* + x_2^*)(x_1 + x_2)$$

$$= x_1^*x_1 + x_1^*x_2 + x_2^*x_1 + x_2^*x_2$$

$$= x_1^*x_1 + 0 + 0 + x_2^*x_2$$

$$= ||x_1||^2 + ||x_2||^2$$
(2)

Prove (b):

$$\|\sum_{i=1}^{n+1} x_i\|^2 = \|\sum_{i=1}^n x_i + x_{n+1}\|^2$$

$$= (x_1^* + x_2^*)(x_1 + x_2) + \dots + (x_n^* + x_{n+1}^*)(x_n + x_{n+1})$$

$$= x_1^* x_1 + x_1^* x_2 + x_2^* x_1 + x_2^* x_2 + \dots + x_n^* x_n + x_n^* x_{n+1} + x_{n+1}^* x_n + x_{n+1}^* x_{n+1}$$

$$= x_1^* x_1 + 0 + 0 + x_2^* x_2 + \dots + x_n^* x_n + 0 + 0 + x_{n+1}^* x_{n+1}$$

$$= \sum_{i=1}^n \|x_i\|^2 + \|x_{i+1}\|^2$$

$$= \sum_{i=1}^{n+1} \|x_i\|^2$$
(3)

Bài Tập 2.3 let $A \in C^{mXm}$ be hermitian. An eigenvector of A is a nonzero vector $x \in C^m$ such that $Ax = \lambda x$ for some $\lambda \in C$, the corresponding eigenvalue

- (a) Prove that all eigenvalues of A are real
- (b) Prove that if x and y are eigenvectors corresponding to distinct eigenvalues, then x and y are orthogonal

Prove (a):

Ta có $A \in C^{mXm}$ là ma trận hermitian $(A = A^*)$

 $\Rightarrow Ax = \lambda x$ với $\lambda \in C$

Để mọi trị riêng của A là thực thì $\lambda=\lambda^*$

$$\lambda \|x\|^2 = \lambda(x^*x) = x^*(\lambda x)$$

$$= x^*(Ax)$$

$$= x^*A^*x$$

$$= (Ax)^*x$$

$$= (\lambda x)^*x$$

$$= \lambda^*x^*x = \lambda^*\|x\|^2$$

$$\Rightarrow \lambda = \lambda^*$$
(4)

Prove (b):

Cho $Ax=\lambda_x x$ và $Ay=\lambda_y y$ với $\lambda_x\neq\lambda_y$. Giả sử x và y là 2 trực giao, nghĩa là $x^*y=0$

$$((Ax)^* - (\lambda_x x)^*)(Ay - \lambda_y y) = 0 \Rightarrow (x^* A^* - \lambda_x x^*)(Ay - \lambda_y y)) = 0$$

$$\Rightarrow ||A||^2 x^* y - A\lambda_x x^* y - A\lambda_y x^* y + \lambda_x \lambda_y x^* y = 0$$

$$\Rightarrow (||A||^2 - A\lambda_x - A\lambda_y + \lambda_x \lambda_y) x^* y = 0$$

$$\Rightarrow x^* y = 0$$
(5)

Bài Tập 2.4 What can be said about the eigenvalues of a unitary matrix?

Prove:

Cho 1 ma trận unitary Q, ta c
ó $Q^*=Q^{-1}.$ giả sử λ là một trị riêng của Q với vector riêng tương
ứng x

$$x^*x = x^*(Q^{-1}Q)x$$

$$= x^*Q^*Qx$$

$$= (Qx)^*Qx$$

$$= x^*\lambda^*\lambda x$$

$$= \|\lambda\|^2 x^*x$$

$$\Rightarrow \|\lambda\|^2 = 1$$
(6)
